

October 2025

Subject: Update Regarding 12HX205, 12HX300 and 12HX330 manufacturing location

As communicated in July 2025 we are in the process of shifting the sourcing location of some of our HX products, which began with the 12HX300. We would like to share that in addition to changing the sourcing location of our 12HX300 product, EnerSys will also be shifting the production of 12HX205 and 12HX330 to the same manufacturing facility. The goal of this transition is to ensure continued availability and enhance our supply chain efficiency. These products will be assigned the following SKU#'s 12HX205R-FR and 12HX330R-FR. This transition will begin December 1st, 2025, for 12HX205 and January 1st, 2026, for 12HX330, as we migrate production to the new facility and process our current inventory.

Although there are some minor physical differences, this newly sourced Sku's will be a direct replacement for the current product and will seamlessly integrate into new and existing cabinets that are commonly sourced from C&C Power. This new battery will meet all performance specifications of the currently produced product, and you can expect the same high quality that you've come to rely on from EnerSys. EnerSys will continue to maintain the capability to produce the existing product in small batches to address any warranty claims and any spot replacement that may arise.

We are confident this transition will be smooth and beneficial, allowing us to improve lead times while maintaining the excellent service and product reliability you expect from us. If you have any questions or concerns regarding this update, please don't hesitate to contact your account representative or our customer support team.
