	Inorganic lead and sulfuric a	cid electrolyte are the primary c	components of eve	ry battery distributed b	y Power Storage Soluti	ions.							
	There are no mercury or cadmium containing products present in batteries distributed by Power Storage Solutions.												
V. FIRST AID MEASURES													
Inhalation:													
	Sulfuric Acid: Remove to fresh air immediately. If breathing is difficult, give oxygen. Consult a physician												
	Lead: Remove from exposure, gargle, wash nose and lips; consult physician.												
Ingestion:	<u></u>	e, gaigie, wash hose and hps, e	onsuit physician										
ingestion.	Sulfurio Acid: Give large qu	antities of water; do not induce	vomiting or conir	tion into the lungs may	occur and can cause n	ormonant injury or doath.							
	• •	antities of water, do not induce	volinting of aspira	ation into the tungs may	y occur and can cause p	ermanent injury of deam,							
	consult a physician												
	Lead: Consult physician imn	nediately.											
Skin:													
	Sulfuric Acid: Flush with lar	ge amounts of water for at least	t 15 minutes; remo	we contaminated clothi	ing completely, including	ng shoes.							
	If symptoms persist, seek me	edical attention. Wash contamin	ated clothing befo	re reuse. Discard conta	minated shoes								
	Lead: Wash immediately wit	th soap and water.											
Eyes:													
	Sulfuric Acid and Lead: Flus	sh immediately with large amou	ints of water for at	least 15 minutes while	lifting lids								
		ention if eyes have been exposed			8								
V FIRE FI	GHTING MEASURES	sition il cycs nave been exposed	differing to deld.										
Flash Point			Flormoble L im	its: LEL = 4.1% (Hydi	rogon Gas)	UEL = 74.2% (Hydrogen	a Gas)						
		1 1 1 1 4 111 4				OEL = 74.2% (Hydrogen	(Gas)						
-	-	bam; dry chemical. Avoid breat	hing vapors. Use a	ppropriate media for si	urrounding fire.								
Special Fire	e Fighting Procedures:												
	U ·	nut off power. Use positive press		0 11	Water applied to electro	olyte generates							
	heat and causes it to spatter.	Wear acid-resistant clothing, gl	oves, face and eye	protection.									
	Note that strings of series co	nnected batteries may still pose	risk of electric sh	ock even when chargin	g equipment is shut do	wn.							
Unusual Fi	re and Explosion Hazards:		-	6									
		gas is generated during chargin	g and operation of	f batteries. To avoid ris	k of fire or explosion k	ceep sparks or other							
		m batteries. Do not allow metall			•								
				iuitaneousiy contact ne	gauve and positive tern	initials of cens and							
		rer's instructions for installation	and service.										
	DENTAL RELEASE MEASU	JRES											
Spill or Lea	ak Procedures:												
	Stop flow of material, contai	n/absorb small spills with dry s	and, earth, and ver	miculite. Do not use co	ombustible materials. If	f possible, carefully							
	neutralize spilled electrolyte	with soda ash, sodium bicarbor	nate, lime, etc. We	ar acid-resistant clothir	ng, boots, gloves, and fa	ace shield. Do not							
	allow discharge of unneutral	ized acid to sewer. Acid must b	e managed in acco	ordance with local, state	e, and federal requireme	ents.							
	Consult state environmental		C										
VII. HAND	DLING AND STORAGE												
Handling:													
	1	le mart have that a second second		1 1									
		lo not breach the casing or empt		he battery.									
•		nock from strings of connected l											
Keep contain	ners tightly closed when not in	n use. If battery case is broken,	avoid contact with	internal components.									
Keep vent ca	aps on and cover terminals to	prevent short circuits. Place car	dboard between la	yers of stacked automo	otive batteries to avoid o	damage and short circuits.							
Keep away	from combustible materials, or	rganic chemicals, reducing subs	stances, metals, str	ong oxidizers and wate	er. Use banding or strete	ch wrap to secure items fo	r						
shipping.				0	C								
Storage:													
	in and dry well ventilated	d areas with impervious surface	a and adagmets age	tainmant in the avant of	fanilla Pottorias shou	14							
	-	-	·		<u>^</u>	Iu							
also be stored under roof for protection against adverse weather conditions. Separate from incompatible materials. Store and handle only													
in areas with adequate water supply and spill control. Avoid damage to containers. Keep away from fire, sparks and heat. Keep away from metallic objects which could bridge the terminals on a battery and create a dangerous short-circuit Charging: There is a possible risk of electric shock from charging equipment and from strings of series connected batteries, whether or not being charged. Shut-off power to chargers whenever not in use and before detachment of any circuit connections. Batteries being charged will generate and release flammable hydrogen gas. Charging space should be ventilated. Keep battery vent caps in position. Prohibit smoking and avoid creation of flames and sparks nearby. Wear face and eye protection when near batteries being charged.

SAFETY DATA SHEET

Lead Components: May cause eye irritation.

Effects of Overexposure - Acute:

- Sulfuric Acid: Severe skin irritation, damage to cornea, upper respiratory irritation.
 - Lead Compounds: Symptoms of toxicity include headache, fatigue, abdominal pain, loss of appetite, muscle aches and weakness, sleep

disturbances and irritability.

Effects of Overexposure - Chronic:

Sulfuric Acid: Possible erosion of tooth enamel, inflammation of nose, throat and bronchial tubes.

Lead Compounds: Anemia; neuropathy, particularly of the motor nerves, with wrist drop; kidney damage; reproductive changes in males and females. Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some toxicologists report abnormal conduction velocities in persons with blood lead levels of 50mcg/100 ml or higher. Heavy lead exposure may result in central nervous system damage, encephalopathy and damage to the blood-forming (hematopoietic) tissues.

Carcinogenicity:

<u>Sulfuric Acid</u>: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid mist containing sulfuric acid" as a Group 1 carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfuric acid solutions contained within a battery. Inorganic acid mist (sulfuric acid mist) is not generated under normal use of this product. Misuse of the product, such as overcharging, may result in the generation of sulfuric acid mist.

Lead Compounds: Lead is listed as a Group 2A carcinogen, likely in animals at extreme doses. Per the guidance found in OSHA 29 CFR 1910.1200 Appendix F, this is approximately equivalent to GHS Category 1B. <u>Proof of carcinogenicity in humans is lacking at present</u>.

Medical Conditions Generally Aggravated by Exposure:

Overexposure to sulfuric acid mist may cause lung damage and aggravate pulmonary conditions. Contact of sulfuric acid with skin may aggravate diseases such as eczema and contact dermatitis. Lead and its compounds can aggravate some forms of kidney, liver and neurologic diseases.

Acute Toxicity:

Inhalation LD50:

Electrolyte: LC50 rat: 375 mg/m3; LC50: guinea pig: 510 mg/m3

Elemental Lead: Acute Toxicity Point Estimate = 4500 ppmV (based on lead bullion)

Oral LD50:

Electrolyte: rat: 2140 mg/kg

Elemental Lead: Acute Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion)

Additional Health Data:

All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most inhalation problems can be avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion: wash hands, face, neck and arms thoroughly before eating, smoking or leaving the worksite. Keep contaminated clothing out of non-contaminated areas, or wear cover clothing when in such areas. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated areas. Work clothes and work equipment used in contaminated areas must remain in designated areas and never taken home or laundered with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment.

The 19th Amendment to EC Directive 67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase 61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms.

Environmental Fate:

XII. ECOLOGICAL INFORMATION

 Lead is very persistent in soil and sediments. No data on environmental degradation. Mobility of metallic lead between ecological compartments is slow.

 Bioaccumulation of lead occurs in aquatic and terrestrial animals and plants but little bioaccumulation occurs through the food chain.

 Most studies include lead compounds and not elemental lead.

 Environmental Toxicity:

 Sulfuric acid:
 24-hr LC50, freshwater fish (Brachydanio rerio): 82 mg/L

96 hr- LOEC, freshwater fish (Cyprinus carpio): 22 mg/L

Lead: 48 hr LC50 (modeled for aquatic invertebrates): <1 mg/L, based on lead bullion

Additional Information:

· No known effects on stratospheric ozone depletion.

· Volatile organic compounds: 0% (by Volume)

· Water Endangering Class (WGK): NA

XIII. DISPOSAL CONSIDERATIONS (UNITED STATES)

Spent batteries: Send to secondary lead smelter for recycling. Spent lead-acid batteries are not regulated as hazardous waste when the requirements of 40 CFR Section 266.80 are met. This should be managed in accordance with approved local, state and federal requirements. Consult state environmental agency and/or federal EPA.

Electrolyte:

Place neutralized slurry into sealed containers and handle as applicable with state and federal regulations. Large water-diluted spills, after neutralization and testing, should be managed in accordance with approved local, state and federal requirements. Consult state environmental agency and/or federal EPA.

Following local, State/Provincial, and Federal/National regulations applicable to end-of-life characteristics will be the responsibility of the end-user.

SAFETY DATA SHEET

	"Power is at the center of everything we do"					
	Excepted from the hazardous materials regulations (H	MR) because the batteries r	neet the requirements of 49 CFR 173.159(f) and 49 CFR 173.159a			
	of the U.S. Department of Transportation's HMR. Battery and outer package must be marked "NONSPILLABLE" or "NONSPILLABLE BATTERY"					
	Battery terminals must be protected against short circuits.					
IATA Dan	gerous Goods Regulations DGR:					
		e the batteries meet the req	uirements of Packing Instruction 872 and Special Provisions A67 of			
	the International Air Transportation Association (IATA) Dangerous goods Regulations and International Civil Aviation Organization (ICAO) Technical					
	Instructions. Battery Terminals must be protected again	st short circuits.				
	The words " NOT RESTRICTED", SPECIAL PROVIS	SION A67" must be provid	ed when the air waybill is issued.			
IMDG:		^				
	Excepted from the dangerous goods regulations for trar	sport by sea because the ba	atteries meet the requirements of Special Provision 238 of the			
	International Maritime Dangerous Goods(IMDG COD	E). Battery terminals must	be protected against short circuits.			
XV. REGU	JLATORY INFORMATION					
UNITED S	STATES:					
EPA SARA	A Title III:					
Section 302	2 EPCRA Extremely Hazardous Substances (EHS):					
	Sulfuric acid is a listed "Extremely Hazardous Substand	ce" under EPCRA, with a T	hreshold Planning Quantity (TPQ) of 1,000 lbs.			
	EPCRA Section 302 notification is required if 1000 lbs	or more of sulfuric acid is	present at one site (40 CFR 370.10). For more information consult			
	40 CFR Part 355. The quantity of sulfuric acid will vary	y by battery type. Contact y	our Power Storage Solutions representative for additional information			
Section 304	CERCLA Hazardous Substances:					
	Reportable Quantity (RQ) for spilled 100% sulfuric aci	d under CERCLA (Superfu	Ind) and			
			tate and local reportable quantities for spilled sulfuric acid may vary.			
Section 311	1/312 Hazard Categorization:		× · ·			
		non-automotive batteries i	f sulfuric acid is present in quantities of 500 lbs or more and/or if lead is			
	present in quantities of 10,000 lbs or more. For more in

<u>Supplier i</u>		mortable under EDCD & Se	ation 212 Tavia Chamical Balanca Inventory (Form D) requirements			
	· · ·		ction 313 Toxic Chemical Release Inventory (Form R) requirements.			
	If you are a manufacturing facility under SIC codes 20	through 39, the following 1	nformation is provided to enable you to complete the required reports:			
		CAGN 1				
	Toxic Chemical	CAS Number	<u>Approximate % by Wt.</u>			
	Lead	7439-92-1	45 - 60			
	Sulfuric Acid Electrolyte	7664-93-9	15 - 20			
	(Sulfuric Acid/Water)	7004-75-7	15 20			
	Tin	7440-31-5	0.1 - 0.2			
	See 40 CFR Part 370 for more details.					
	If you distribute this product to other manufacturers in	SIC Codes 20 through 39, 1	this information must be provided with the first shipment			
	of each calendar year.	-				
	·					
	The Section 313 supplier notification requirement does	not apply to batteries, which	ch are "consumer products".			
	The Section 313 supplier notification requirement does not apply to batteries, which are "consumer products".					
TSCA:	·····					
15011						
	TSCA Section 8b – Inventory Status: All chemicals comprising this product are either exempt or listed on the TSCA Inventory.					
	TSCA Section 12b (40 CFR Part 707.60(b)) No notice of export will be required for articles, except PCB articles, unless the Agency so requires in the					
	context of individual section 5, 6, or 7 actions.					
	TSCA Section 12 (40 CEP Dart 707 20). No import contification required (EDA 205 D 00 001 June 1000 Jetus durties to the					
	TSCA Section 13 (40 CFR Part 707.20): No import certification required (EPA 305-B-99-001, June 1999, Introduction to the Chamical Import Pacuirements of the Taxic Substances Control Act. Section IV (A)					
DCDA	Chemical Import Requirements of the Toxic Substances Control Act, Section IV.A)					
RCRA:		11				
	Spent Lead Acid Batteries are subject to streamlined handling requirements when managed in compliance with 40 CFR section 266.80 or 40 CFR part 273.					
	Waste sulfuric acid is a characteristic hazardous waste; EPA hazardous waste number D002 (corrosivity) and D008 (lead).					
CAA:						
	Power Storage Solutions supports preventative actions concerning ozone depletion in the atmosphere due to emissions of CFC's and other ozone depleting					
	chemicals (ODC's), defined by the USEPA as Class I substances. Pursuant to Section 611of the Clean Air Act Amendments (CAAA)					
	of 1990, finalized on January 19, 1993, Power Storage Solutions established a policy to eliminate the use of Class I ODC's prior to the May 15, 1993 deadline.					
STATE RI	EGULATIONS (US):					
	Proposition 65:					
	Warning: Battery posts, terminals and related accessori	es contain lead and lead co	mpounds, chemicals known to the State of California to cause			
	cancer and reproductive harm. Batteries also contain other chemicals known to the State of California to cause cancer. Wash hands after handling.					
INTERNA	TIONAL REGULATIONS:					
	Distribution into Quebec to follow Canadian Controlled	Product Regulations (CPI	(3) 24(1) and 24(2).			
I						

Distribution into the EU to follow applicable Directives to the Use, Import/Export of the product as-sold.

XVI. OTHER INFORMATION Revised AC (04-25-17)

NFPA Hazard Rating for Sulfuric Acid:

Flammability (Red) = 0

Health (Blue) = 3

Reactivity (Yellow) = 2 Sulfuric acid is water-reactive if concentrated.

DISCLAIMER

This Safety Data Sheet is created by the distributor to comply with the requirements of 29 CFR 1910.1200. To the extent allowed by law,

the distributor hereby expressly disclaims any liability to any third party, including users of this product, including, but not limited to, consequential or other damages, arising out of the use of, or reliance on, this Safety Data Sheet.
